

CLOUD AI SUMMIT • HACKATHON RUBRIC

Score the system, not the flash.

A quick judging sheet for practical AI workflows built by small law firm teams.

Scoring

25 pts**Business value**

Does this solve a real, frequent, painful problem in the firm?

High score: obvious time savings, better consistency, fewer misses, clearer delegation.

20 pts**Workflow clarity**

Are the trigger, inputs, output, owner, and review step obvious?

High score: someone else could describe how to run it after a 2-minute explanation.

20 pts**Usability**

Could a normal staff member run this without the builder standing nearby?

15 pts**Risk control**

Does it avoid client-confidentiality, hallucination, unauthorized-practice, and data-permission traps?

10 pts**Evidence of testing**

Did the team try edge cases, fake contacts, missing fields, or bad inputs?

10 pts**Monday readiness**

Is there a credible next step for using or improving it after the summit?

Presentation questions

1. What job does this replace, support, or accelerate?
2. What information does it need to do that job?
3. What output does it produce?
4. Where can it be wrong?
5. Who reviews it?
6. What would make this safe enough to try next week?
